

Problem Statement:

Even though drinking water is good for you, nobody ever really Talks about how unsafe drinking bottled waters can actually be.

Details:

Well, there's some many may know the water in water bottles tend to have a lot of microplastics in them due to being encased in plastic bottles for a very long time. Now, using plastic bottles is usually safe, but due to being in cars or hot temperatures they may have a possibility of having had some of the chemicals rubbed off into the water or drinkable substance. Now a little bit of this may not be dangerous, but over drinking micro plastics in plastic bottled water may cause you some health problems in the future. Many doctors recommend minimizing the number of times you may drink out of plastic bottles a day.
